What is Mobile Sync?

Mobile Sync is a software system that Android application developers can use to keep SQL Server databases in sync with local SQLite databases on Android devices.

What does the architecture look like?

How do I set it up?

- Install **Mobile Sync Admin** onto your web server (you can download this from <https://www.dattrax.com/Dattrax/MobileSync.aspx>) → How?
- Open **Mobile Sync Admin** and click Setup Server to install **Mobile Sync**, the web service that the mobile devices talk to.
- Set up a database on your SQL Server system.
- Build an Android app that uses the
